

WILDFLOWER

CHARDONNAY

WESTERN AUSTRALIA

Wildflower Western Australia There are over 12,000 species of wildflowers that grow in Western Australia, over half of which cannot be found anywhere else on earth. The native bush surrounding our vineyards abounds with these vivid blooms providing a distinctive wine landscape like no other.

Tasting Note Just like the region's flora, this wine is distinctively Western Australian - white peach accents offer a bright, mid-weight finish to this gently oaked Chardonnay. Grown in handpicked sites across Australia's Margaret River and Pemberton best performing regions for the Chardonnay grape varietal.

3 of 12,000 Flame Pea - *Chorizema cordatum* Lindl. The genus *Chorizema* contains approximately eighteen species and all but one are endemic to Western Australia. *Chorizema cordatum*, commonly known as the Heart-leaf Flame Pea, occurs naturally in the forests of south-western Australia on gravelly or loamy soils.

When in flower this small scrambling shrub is conspicuous with its loose racemes of orange-red or yellow pea flowers. The plant flowers in spring; the blooms are in racemes up to 12 cm long and are borne either terminally or in the leaf axils.
